

# DRIVEN

The Seatorque Newsletter FLIBS Edition for the Marine Professional

Issue **10**

**In this Edition of DRIVEN, we highlight a few noteworthy collaborative projects and the state-of-the-art Seatorque Propulsion Systems designed specifically for these builds.**

**Visit Seatorque at FLIBS and let's build your next vessel together!**

**Located in the Bahia Mar Engine Tent Booth # 1227**

**Fort Lauderdale International Boat Show  
October 29th - Nov 2nd!**

## **Dedicated to the Power of Innovation through Collaboration.**

As we celebrate 35 years of American Made Innovation, we acknowledge the industry partnerships and loyal customers who have made this journey possible. The strength of a partnership lies in the ability to innovate, and together deliver a quality product. Seatorque's full order book—with some of our biggest projects yet—is a testament to this.

To all the amazing companies, designers, engineers, and naval architects who have worked with Seatorque as their trusted propulsion partner for over 35 years, and to the boat owners who cherish their safe, comfortable, quiet and efficient time at sea with Seatorque on board, our warmest thanks and appreciation for your passion and support.

## **Retro-Fit News**

**Just relaunched Ocean Alexander 100ft!** After facing persistent vessel vibrations despite numerous attempts to eradicate, multiple shaft replacements, and years of frustration, the client engaged Seatorque. Our team designed a complete retrofit installation, removing the existing running gear and replacing it with a total Seatorque package, including an ST4B-400 propulsion system and new struts. This led to immediate results: smooth operation with no noticeable vibrations across the entire RPM range. All the known benefits and quality aspects of Seatorque led to yet another successful retro-fit!

## **A Collaboration of "Made in America" Ingenuity.**

**Burger Yachts, Wisconsin USA** - American shipbuilding is on the move, and Seatorque Control Systems is the proud propulsion partner to the American Shipbuilder Burger Yachts for its new 180-foot (55m) Series Motor Yachts. For over 160 years, Burger Boat Company has been renowned for designing and building custom yachts that embrace meaningful innovations and seamlessly integrate state-of-the-art technology.

**Burger 180ft - Seatorque ST4B-550**

Currently under construction, the Burger 180ft is a stunning example of Burger's continuing creativity, utilizing mechanical features to make the cruising experience even more sophisticated and comfortable. Seatorque's ST4B-550 Propulsion System was custom-designed to meet the exacting needs of this extraordinary Motor Yacht, where luxury and comfort knows no bounds.

## **Our Propulsion Partners of the South**

**MCP Yachts** - is Brazil's premier mega yacht builder. Under construction now at the yard in GUARUJÁ is the new Seatorque equipped 164-foot (50m) Motor Yacht. This vessel was designed with a custom engineered M4B-450 Seatorque propulsion system.

**MCP Yachts 164ft - Seatorque M4B-450**

MCP Yachts is a shipyard with 45 years of history and multiple accolades at the World Superyacht Awards for vessels equipped with Seatorque propulsion systems. For over 15 years, Seatorque has worked closely with the MCP design and Engineering team and been the exclusive propulsion system provider to MCP Motor Yachts, starting with Hemisphere 140 Raffaella II—the largest yacht ever built in South America. MCP Yachts are truly built with passion.

## **Heading Overseas to Turkey**

**Bering Yachts** - also featured in the last edition, finds a place here again as a leader in crafting exceptional explorer yachts—a bold statement in the world of marine exploration. Tough enough to cross oceans yet refined enough to feel like home, from the islands to the Arctic, their vessels prioritize safety and reliability without compromise. This is precisely why Seatorque has been supplying Bering Yachts with our exceptionally reliable propulsion systems since 2013.

**Bering Yachts 145 - Seatorque ST4B-450**

Seatorque just delivered the propulsion system for the Bering 125ft - a Seatorque ST4B-400 System, to the Bering yard in Anatolya Turkey. Equipment for the new Bering 145ft, using the ST4B-450 Seatorque is currently underway, not to mention the smaller sister ship, the Bering 88 equipped with Seatorque ST4B-300 propulsion systems.

These working relationships are forged on the merits of teamwork and an unparalleled mandate for quality, reliability, and performance, ultimately resulting in the best performing vessels at sea. That's our promise. Let's design your next vessel together.
